What is Pompa?

Pompa is a management application for service stations. It runs in the browser and installs on the phone like an app. Everyone has their own account: the attendant sees their shift, the supervisor follows the activity, the manager sees everything.

- **The attendant** — Opens the shift, reads the indexes, sells at the counter, closes: everything is guided, in 2 minutes.
- **The supervisor** — Follows the shifts, takes the gaugings, records the deliveries, manages the stock.
- **The manager** — Sees everything, sets the prices, creates the team, reads the reports, wherever they are.

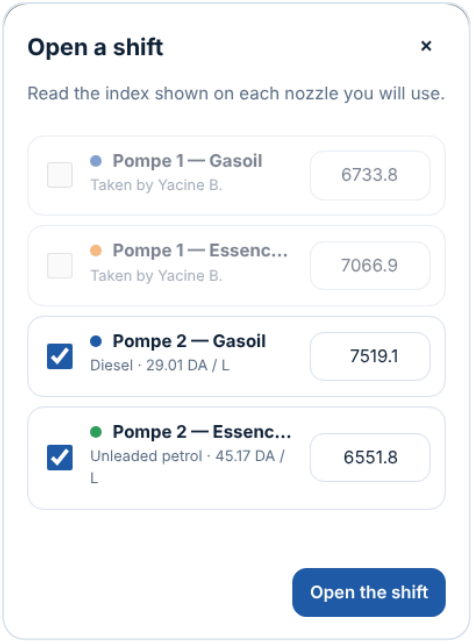

For the attendant

1 Open my shift

Before serving the first customer, you open your shift: it ties the litres and the money to your name.

1. On the home screen, tap “Open my shift”.
2. For each nozzle you will use, read the index shown on the meter and check that it matches the proposed figure.
3. If the figure is different, correct it: the manager will be told about the difference.
4. Untick the nozzles you do not use, then tap “Open the shift”.

💡 A nozzle already taken by another attendant appears greyed out: it cannot be used in two shifts at the same time.

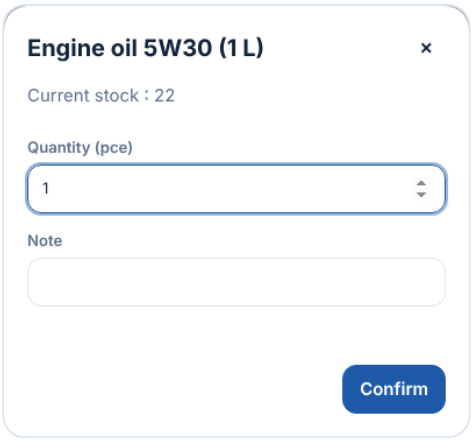

Screenshot — Open my shift

2 Sell at the counter (oil, filter...)

Product sales made during your shift are added to the takings you must hand in.

1. Open the “Stock” tab and find the product (search by name).
2. Tap “Sell” and enter the quantity.
3. Confirm: the stock goes down and the sale is tied to your open shift.

💡 Open your shift before selling: without an open shift the sale is not counted in your takings.

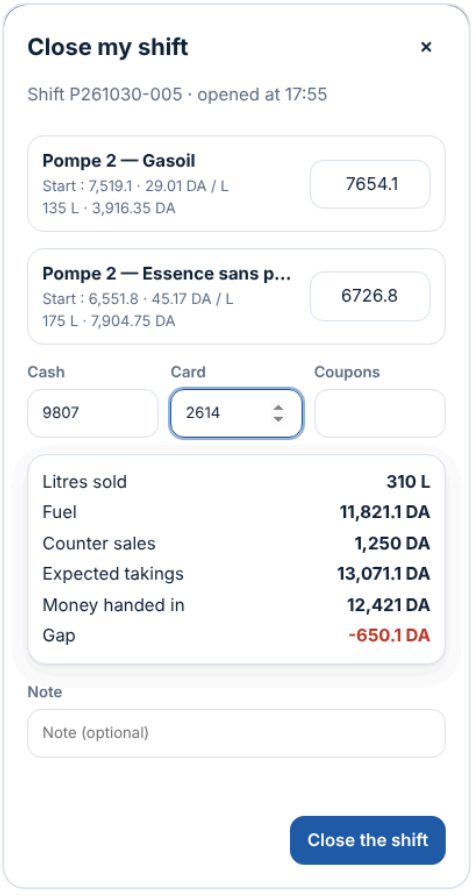

Screenshot — Sell at the counter (oil, filter...)

3 Close my shift

At the end of your service, you read the end indexes and declare the money handed in. Pompa calculates the expected takings and the gap.

1. Tap “Close my shift”.
2. Enter the end index of each nozzle: the litres and the amount are calculated automatically.
3. Enter the money handed in: cash, card and coupons.
4. Check the “Gap” line: green means the cash is balanced, red means money is missing.
5. Tap “Close the shift”, then print the slip if needed.

💡 A typing mistake after closing? Ask the supervisor or the manager to correct the shift.

Screenshot — Close my shift

4 Understanding the cash gap

Gap = money handed in − expected takings.

1. Expected takings = litres sold × price of each fuel + counter sales of your shift.
2. A negative gap (red) means money is missing; a positive one means there is too much.
3. A small difference is tolerated: the threshold is set by the manager.

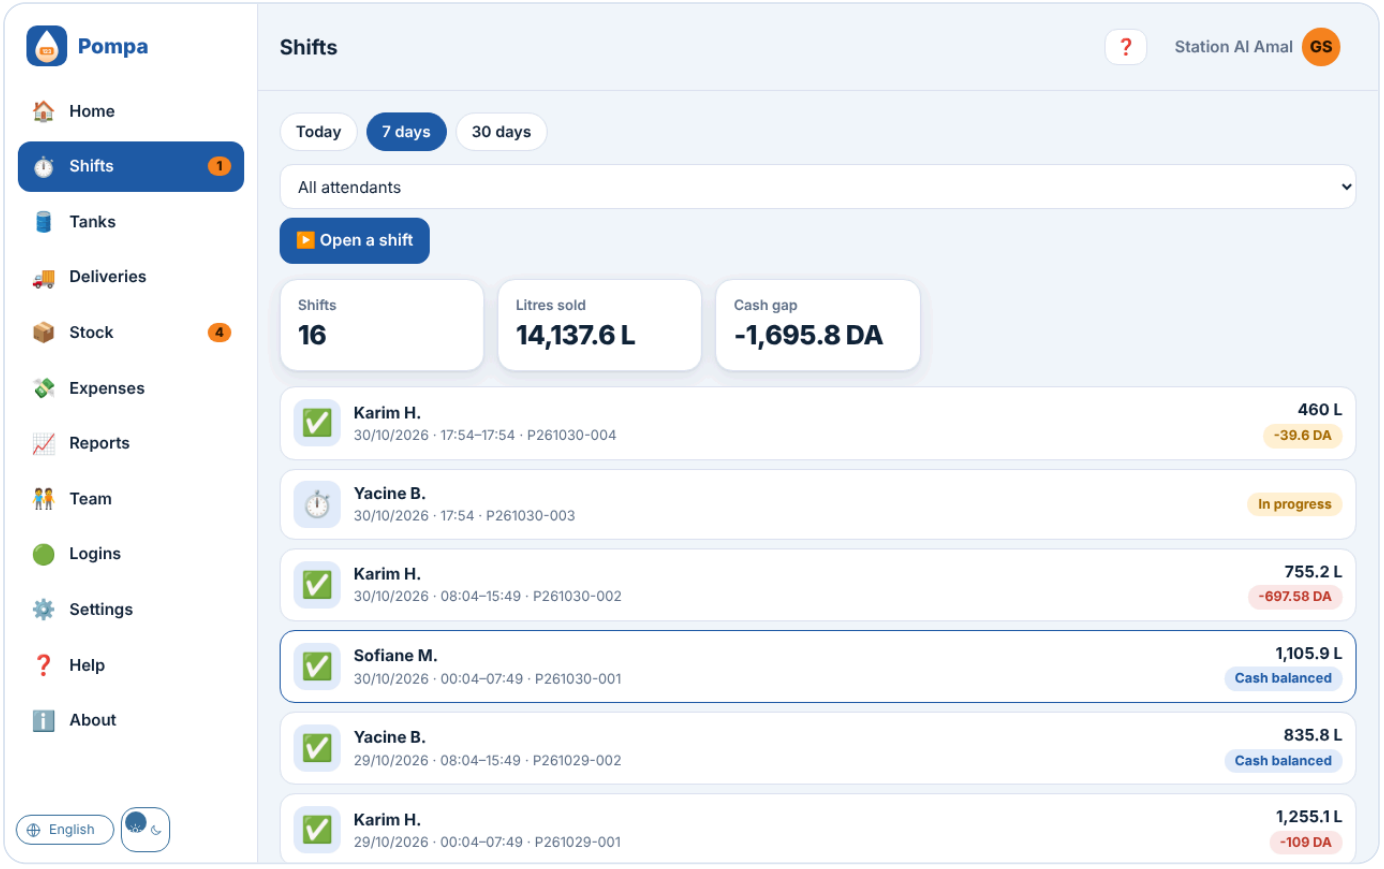

For the supervisor and the manager

5 Follow shifts and gaps

The shift list shows who is working, the litres sold and each person's cash gap.

1. Open "Shifts": choose the period and, if needed, an attendant.
2. Tap a shift to see the detail: indexes, litres, amounts, cash, card, coupons.
3. A shift that is still open can be closed on the attendant's behalf, or cancelled if it was opened by mistake.
4. To fix a typing mistake in a closed shift, tap "Correct": the correction is recorded.

💡 A yellow "different start indexes" warning flags litres sold between two shifts without being recorded: to be checked.

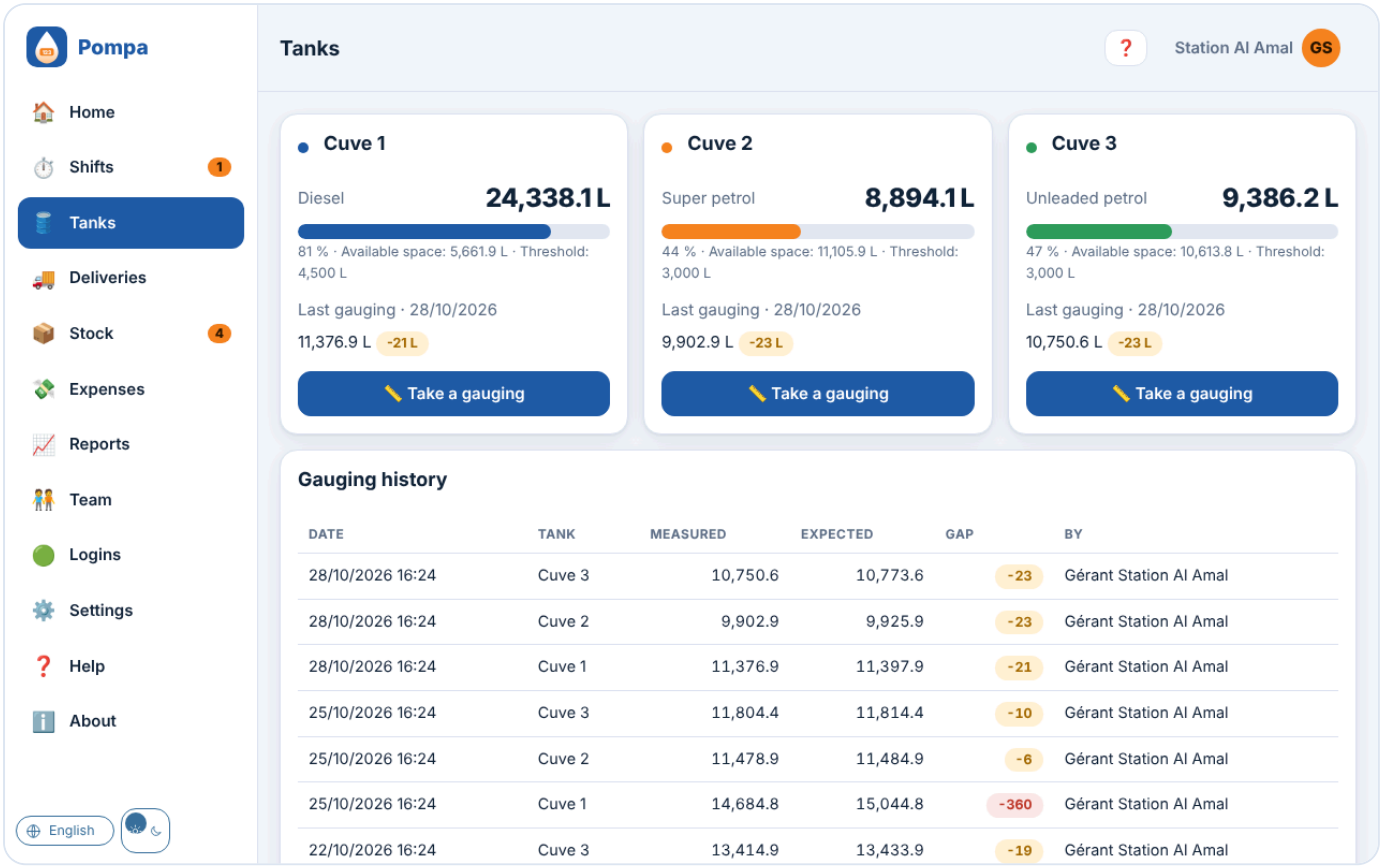

Screenshot — Follow shifts and gaps

6 Check the tanks (gauging)

A tank's theoretical stock = last gauging + fuel received − litres sold since. Gauging compares this figure with the real measurement.

1. Measure the tank with the dipstick.
2. Open "Tanks", tap "Take a gauging" and enter the measured volume.
3. Pompa shows the gap: beyond the tolerance, a red alert appears on the home screen.
4. The gauging becomes the tank's new reference.

> 💡 Take the gauging between two shifts, when no nozzle of the tank is in use.

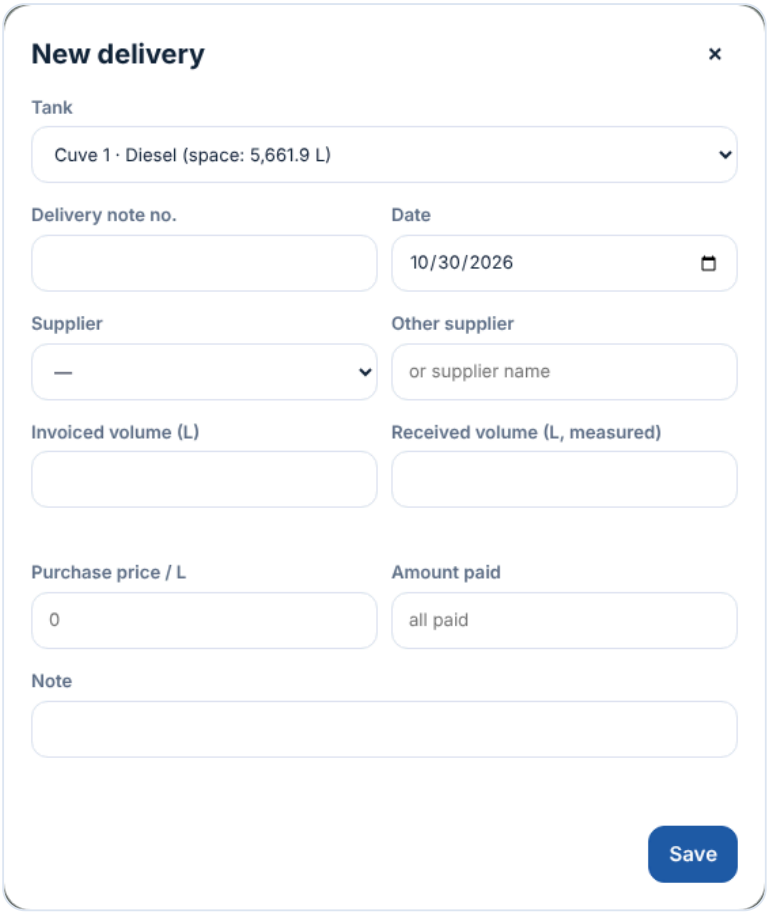

Screenshot — Check the tanks (gauging)

7 Record a fuel delivery

Each delivery compares the invoiced volume with the volume actually received.

1. Open “Deliveries” and tap “Delivery”.
2. Choose the tank, enter the delivery note number and the supplier.
3. Enter the invoiced volume, then the received volume measured with the dipstick after unloading.
4. Enter the purchase price per litre and the amount paid: the rest is a supplier debt that you settle later.

💡 A gap between invoiced and received is shown in red: keep the delivery note to make a claim.

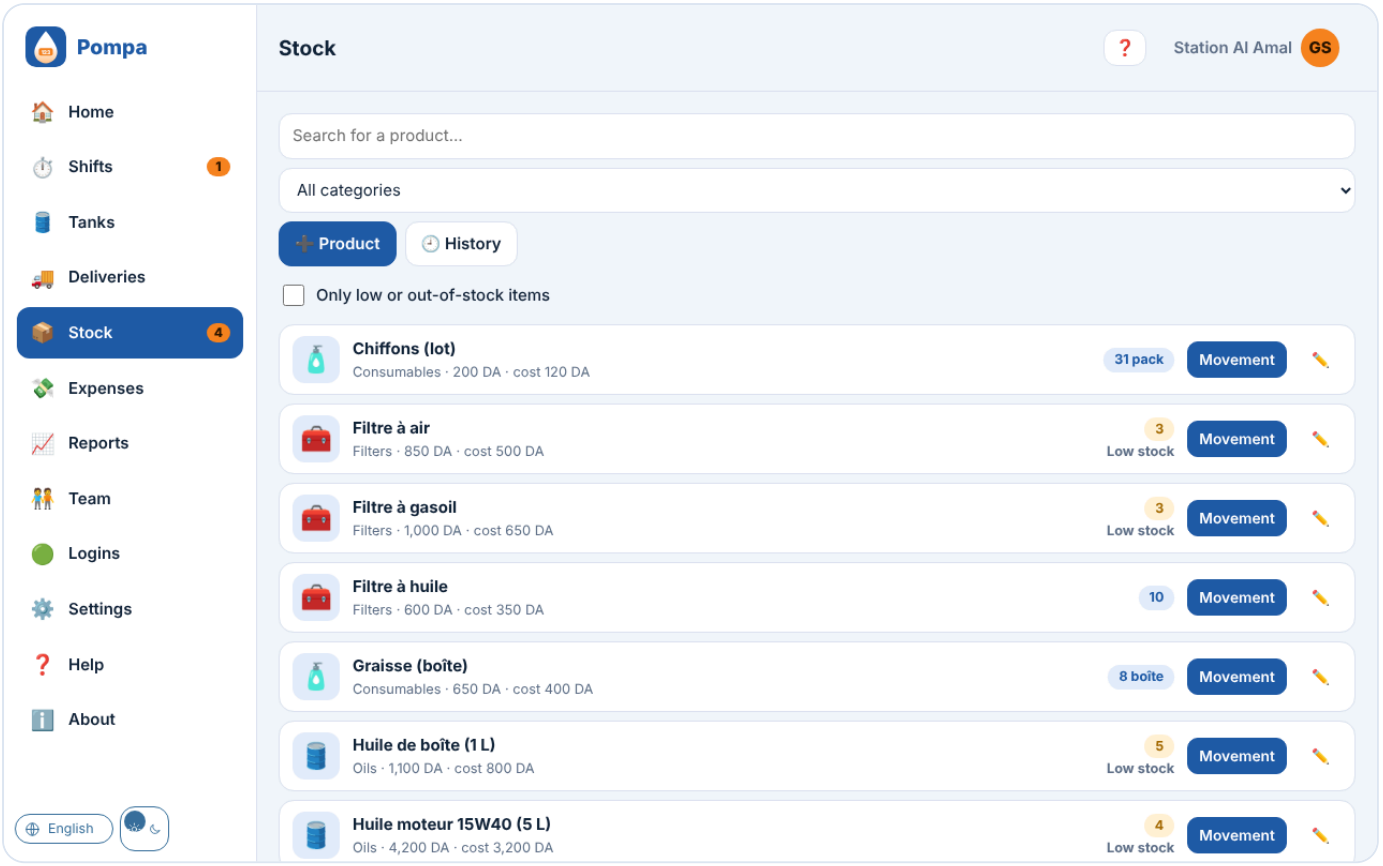

Screenshot — Record a fuel delivery

8 Manage the stock (oils, filters, consumables)

The catalogue lists the products sold at the counter or used by the station.

1. Tap “Product” to create one: name, category, purchase and sale price, alert threshold, initial stock.
2. Tap “Movement”: stock in (purchase), sale, internal use, loss, inventory or adjustment.
3. The average purchase price is recalculated at every stock-in.
4. Products under the threshold are flagged on the home screen.

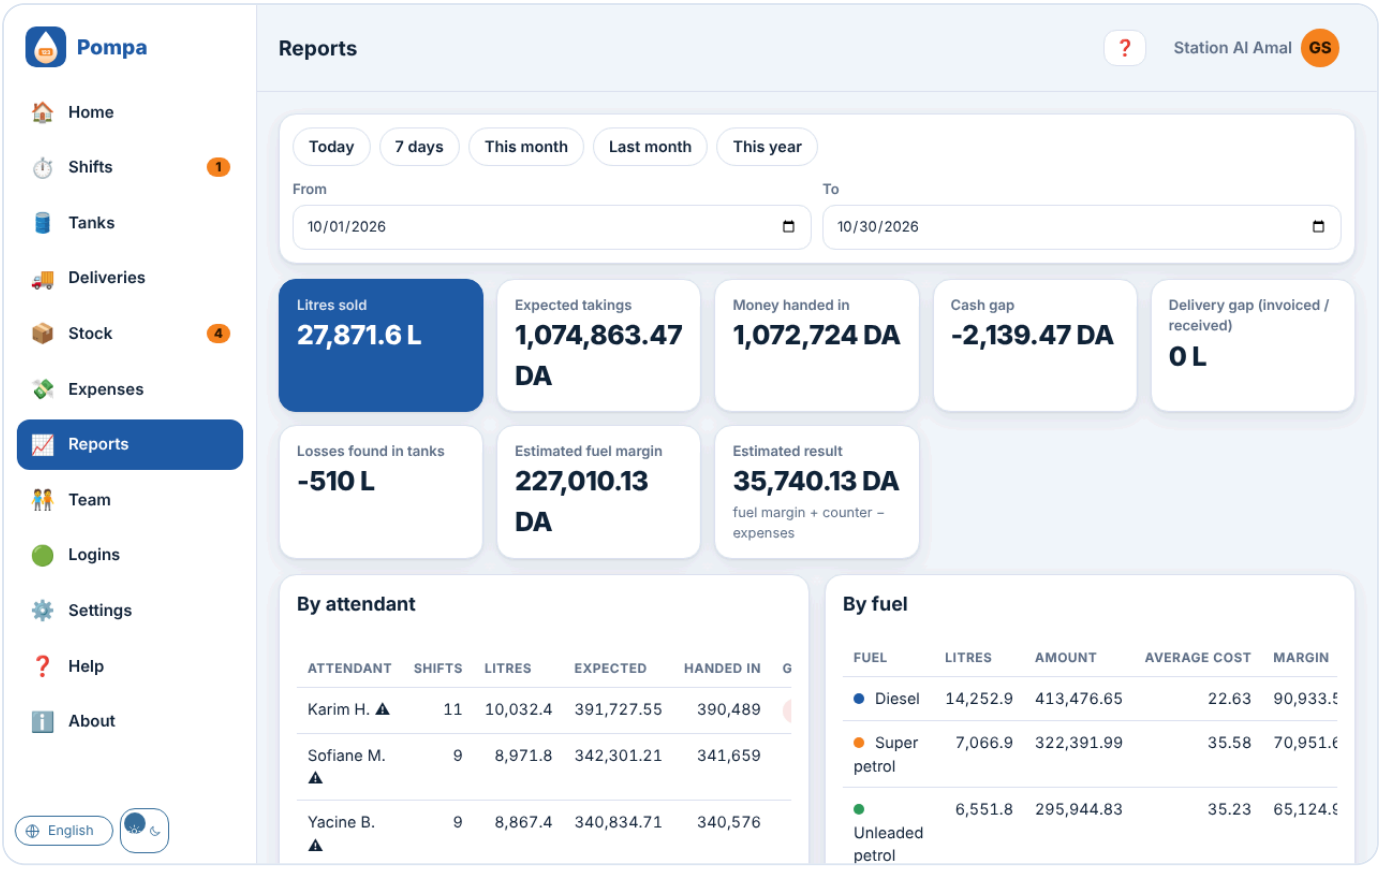

Screenshot — Manage the stock (oils, filters, consumables)

9 Read the reports

Reports summarise a period: litres, takings, gaps, deliveries, tank losses, margin and result.

1. Choose the period (7 days, this month, the year...).
2. Look at the totals by attendant, by fuel and by day.
3. Export to CSV for Excel, or print the page.

> 💡 The fuel margin uses the average purchase price of your deliveries: record the purchase price at each delivery.

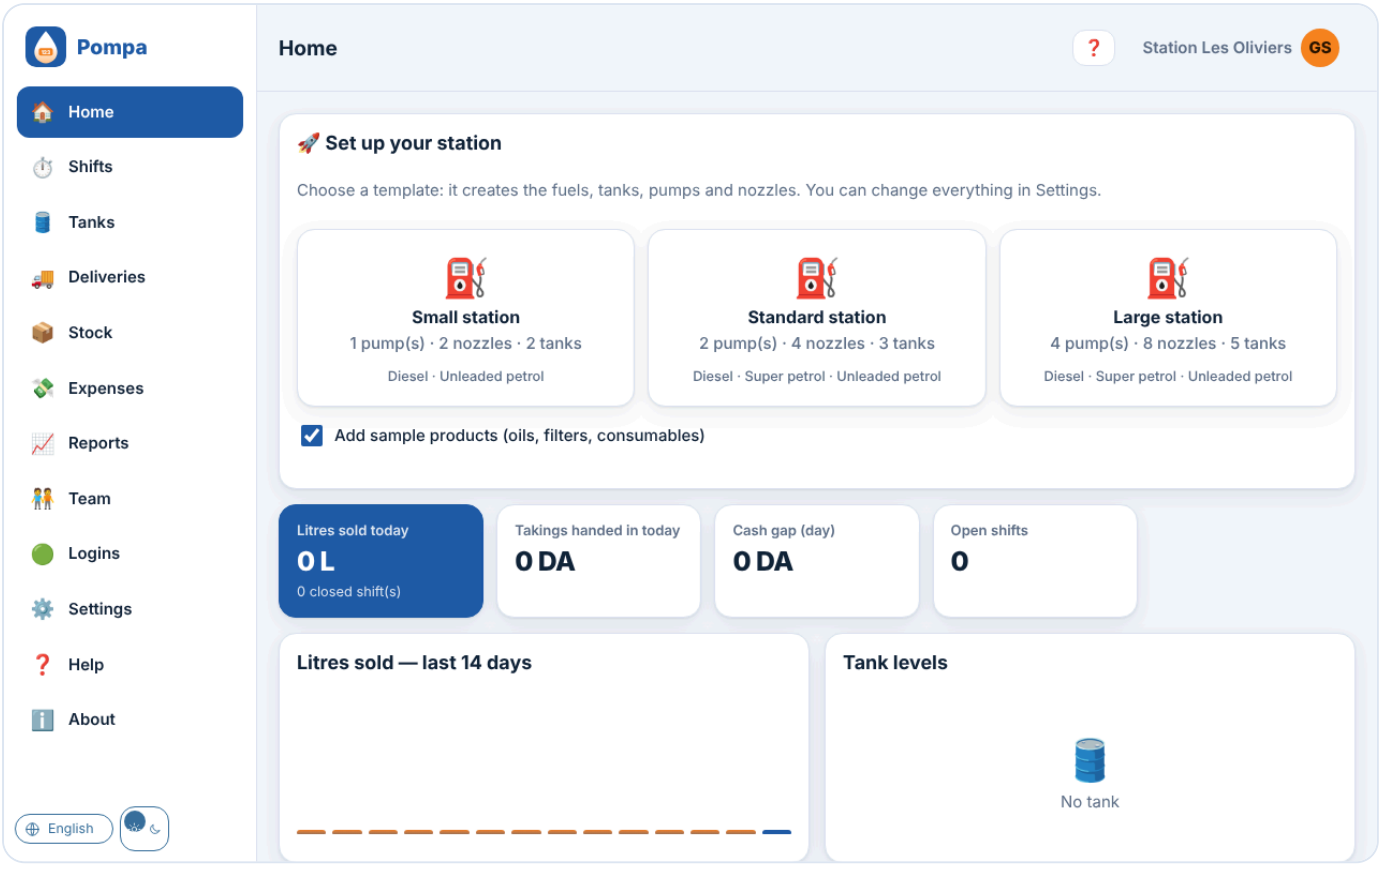

Screenshot — Read the reports

For the manager

10 Set up the station at the start

The first time, you choose a station template; Pompa creates the fuels, tanks, pumps and nozzles.

1. On the home screen, choose “Small”, “Standard” or “Large station” (with or without sample products).
2. Open “Settings”: check the station name, the currency and the fuel prices.
3. For each tank, enter the capacity and the starting volume; take a first gauging.
4. In “Pumps and nozzles”, enter the current meter index of each nozzle.
5. Create your attendants’ accounts in “Team”.

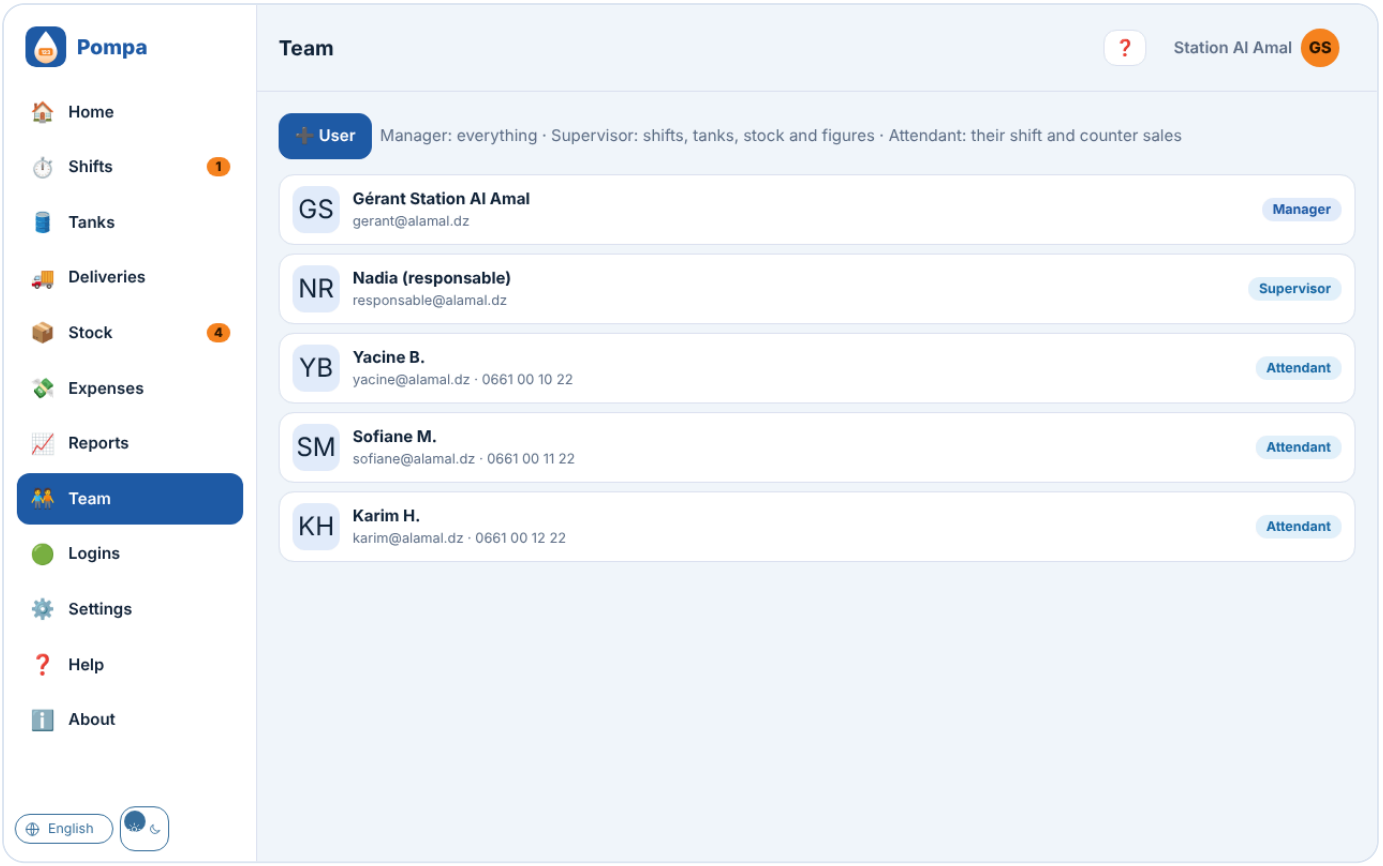

Screenshot — Set up the station at the start

11 Create the team and access

Everyone has their own account and sees only what concerns them.

1. Open “Team” then “User”.
2. Choose the profile: Attendant (their shift and counter sales), Supervisor (shifts, tanks, stock, figures) or Manager (everything).
3. Note the temporary password shown and give it to the person.
4. To remove access, untick “Active account” (the history is kept).

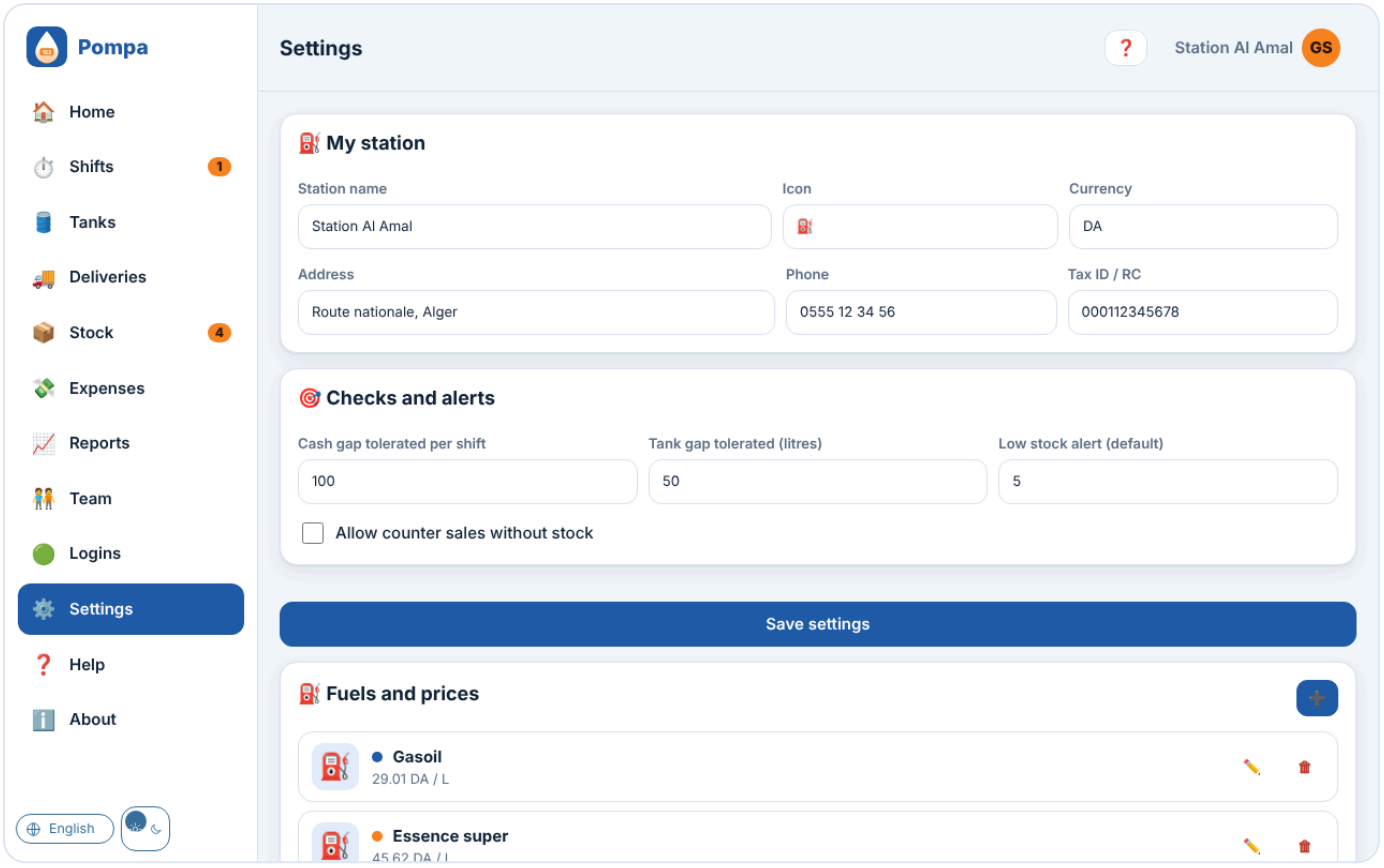

Screenshot — Create the team and access

12 Prices, tolerances and alerts

Settings lets you adapt Pompa to your station.

1. Change a fuel price: the new price applies to the next shifts, the old ones keep their price.
2. Set the cash gap tolerated per shift and the tolerated tank gap (in litres): beyond them, alerts appear.
3. Add a tank, a pump or a nozzle when the station grows.
4. An item that has already been used is archived, never erased: the history stays accurate.

Screenshot — Prices, tolerances and alerts

For the publisher (Pompa seller)

1 Create a customer station

Console › Stations › New customer: company code, name, manager e-mail, licence end. A welcome message is ready to send.

2 Follow trial requests

Requests sent from the home page land in Leads; “Create the trial” prepares the station and sends the access details.

3 Manage the licence

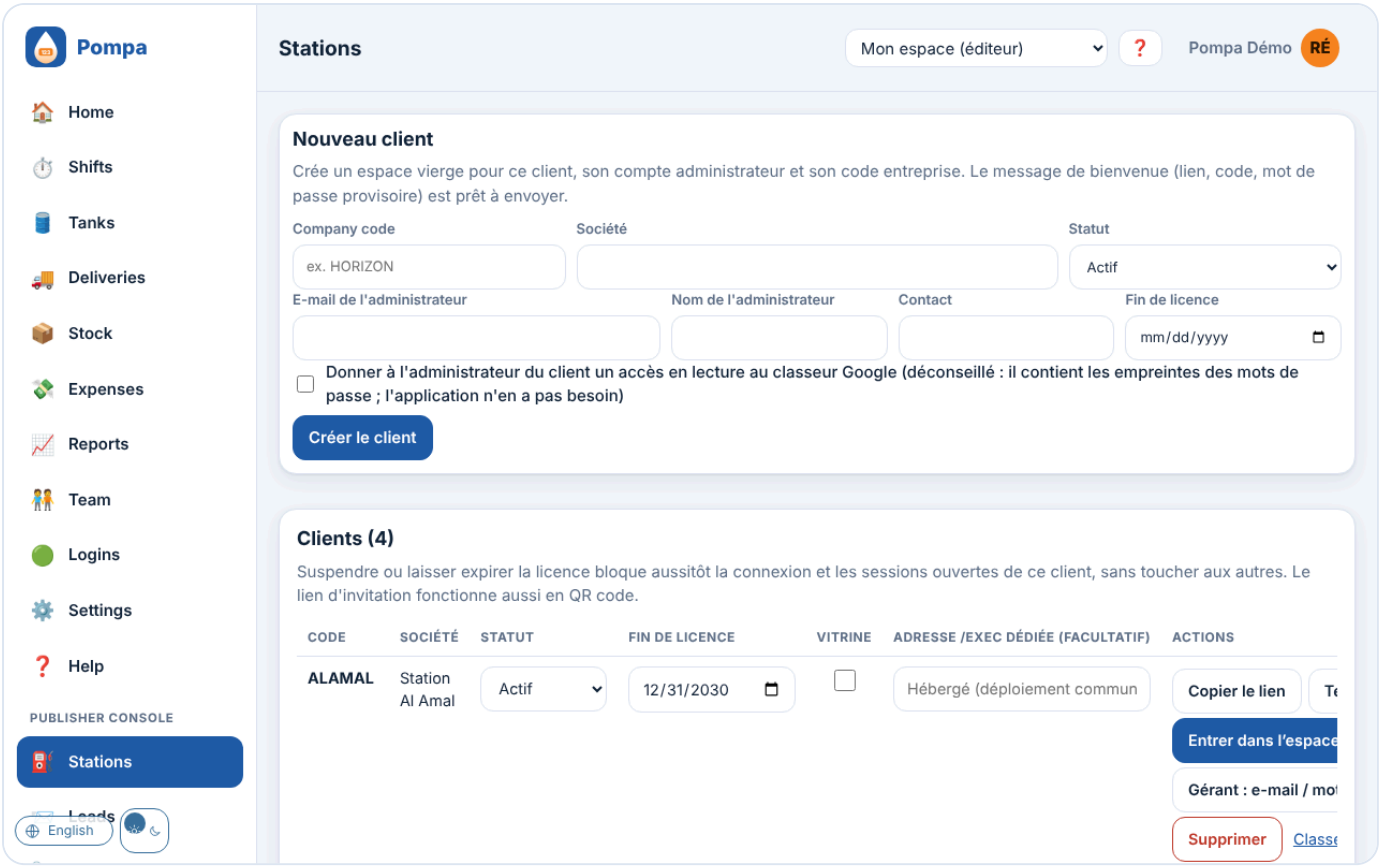

Status (trial, active, suspended) and end date per station; an expired licence immediately blocks that station’s logins.

4 Help a customer

Support mode opens a station’s space in place of its manager; every access is logged.

5 Follow logins and version

The console shows who is online in each station and whether the site and the server are on the same version.

Frequently asked questions

I forgot to close my shift yesterday.

The supervisor or the manager can close a shift for you: open the shift in “Shifts” and tap “Close on their behalf”.

I got an index wrong when closing.

Ask the supervisor or the manager: “Correct” recalculates the litres, the expected takings, the gap and the tank stock.

The nozzle is already taken by another shift.

A nozzle cannot be in two shifts at once. Have the other shift closed, or choose another nozzle.

Why is there a gap between the theoretical stock and the dipstick?

Evaporation, measurement error, litres served without an open shift, leak or theft. Measure again: if the gap remains, check the indexes and the deliveries.

How do I change the fuel price?

Settings › Fuels and prices. The new price applies to shifts opened after the change.

I forgot my password.

Ask the manager: in “Team” they generate a new password. The manager contacts the Pompa publisher.

How do I install Pompa on my phone?

Tap the “Install” button at the top of the screen (on iPhone: Share › Add to Home Screen).

Does Pompa work without internet?

No: a connection is needed to save. If the network drops, wait for it to return before confirming; what you typed on screen is not lost while the page stays open.
